

Securing Smart Devices

DON'T LET YOUR SMART DEVICES OUTSMART YOU

Best Practices:

- Before connecting a smart device in the workplace, contact your supervisor or the IT department.
- Encrypt data to help prevent unauthorized access location services.
- Change the default password to a complex, long password with a mix of letters, numbers, and symbols.
- Check app settings and disable unnecessary data collecting (location services).
- Turn off Bluetooth when you're not using it.
